

# ECM dashCAN, dashCAN+ Remote CAN Display

Now dashCAN+ available with  
six programmable analog outputs!

ECM's dashCAN and dashCAN+ are remote displays for ECM's CAN modules (ex. LambdaCAN). Simply attach dashCAN or dashCAN+ to the CAN bus and any two parameters from the network can be displayed. For dashCAN+, any six parameters also can be converted to analog output signals. Perfect for dashboard use, dashCAN and dashCAN+ use tall (13mm), 15-segment LED digits for easy viewing at all cabin temperatures and lighting conditions. The module, display parameters, display averaging rate, LED intensity, and for dashCAN+, analog output parameters, are programmable via the front-panel buttons. Multiple dashCANs and dashCAN+s can be attached to the CAN bus. ECM's dashCAN and dashCAN+ are superb additions to your ECM CAN network.
