

ECM DIS1000 Remote Display for AFM, FA Module

68 mm x 32 mm x 100 mm

ECM's DIS1000 is a remote display for the AFM and FA series air-fuel ratio modules.

The DIS1000 packs tall (15 mm) LED numerals into a small (68 mm x 32 mm x 100 mm) package. Easily read in bright sunlight and not distracting at night, the DIS1000 is perfect for in-vehicle (top-of-dash, in-dash, below-dash) and remote dynamometer applications. The DIS1000 comes with a 6' harness that connects to an 11 to 28 VDC power source and the analog output of the AFM or FA module. The harness can be extended by using common pre-made BNC cables.

The DIS1000 remote display is the perfect accessory for any AFM and FA series air-fuel ratio module: AFM1540, AFM1500, AFM1000 (standard and "b" version), FA1500, and FA1000.

Order: P/N DIS1000-A (for std. AFM)
DIS1000-B (for b version AFM)
DIS1000-FA (for FA)
DIS1000-LA (displays lambda for std. AFM)
